

Presentation

Lorena Cruz²

From the Institute of Sciences Education, Facultad de Filosofía y Letras, Universidad Nacional de Cuyo, we consider the possibility of creating this scientific publication called **Encuentro Educativo**. We are inspired by the purpose of exchanging perspectives and knowledge that is built from the diversity of the processes of the educative investigation

We believe it is important to gather and make visible advances and results of educative investigations that reflect the complex spectrum and enriching not only the diversity of phenomena as a study subject but also the different ways of building knowledge. Besides, not only putting the regard in the results but also in the process of how we achieve that construction, its tensions, dilemmas and reflections.

Our aim is to contribute to the exchange, debate, discussion and reflection from the publications as much as investigation articles and pedagogic experiences, that reveals the concerns, preoccupations and current agenda of education in our region making it extensible to all Iberoamerica.

We hope to offer the educational community interested, from now on and for a long time, a meeting point that allows interpellation to transform.
